

Operational Continuity Objectives

Operational Continuity

We ensure that the delivery of application services is supported by redundant solutions, in high reliability, not only at Archiva's primary site, but also geographically.

Archiva, through the ISO 22301 certification, commits itself to a set of procedures and good practices related to business continuity management, defining the requirements necessary to plan, establish, implement, and operate a documented management system, to monitor, maintain active and continuously improve the management system aimed at protecting, reducing the possibility of occurrence, preparing, responding to and restoring destabilising events for an organisation, when they occur.

Archiva's Business Continuity management system is for us an evolution of the ISO 9001 Quality Management System.

If ISO 9001 helps us manage 'business as usual', Business Continuity Management ensures the maintenance, recovery and restoration of services after major disruption events.
